

The simplest and most affordable solution to home lighting automation

- ✓ Simply replace existing light switches
- ✓ No additional wiring required
- ✓ Operate any light from any room
- ✓ Control all lights from your Elcop app
- ✓ Stylish glass front touch panels

CONVENIENCE

The system consists of stylish touch screen wall switches that can be installed and programed in minutes without any additional wiring*. Just ask your electrician to swap the existing light switch with the new smart controller...

SIMPLICITY

The system allows you to control any number of lights from each wall switch or from your mobile app. You can start with just two controllers and program a single light, a whole room or a series of lights to suit your needs.

FUNCTIONALITY

The controllers are available in 1, 2 and 3 gang (switch) options that can each be programed to control multiple rooms or light sets. The master switch controls the slave units and both can be set by the IR remote control.

CONTROL

The system comes complete with an IR remote which allows you to program and control all your home lighting.

The simple set up procedure allows you to change configurations or add additional lights, rooms or features at any time.

Also by simply downloading the app you can fully control your home on your iOS or Android smart phone.

** Neutral wire must be present at rear of switch*

Master Control: 3 Gang

The Master control acts as the primary unit for your home. Simply install the Master control as a replacement for your current light switch and program each button to a designated area in your home. The Master unit is capable of controlling any lights within a single room but also all connected lights within the house.

Slave Control : 2 Gang

The Slave controller functions the same as a traditional light switch and is required to communicate with the Master unit. It also has the added benefit of being able to access all lighting points in your home via the IR remote control giving you total flexibility from any room.

Easy Installation

The back of each controller unit is clearly marked for easy installation by your qualified electrician. Each switch has been quality approved and meets local electrical standards.

** Both Master and Slave controllers are available in 1,2 & 3 Gang (switch) options.*

Designed with the smart home in mind

Program your chosen lights in less than a minute with the IR Controller.
